LCD CEILING SUPPORT

PFC 915

The PFC 915 LCD ceiling support features a sloping ceiling mounting plate, 46-74 cm adjustable extension tube, LCD turn & tilt unit and a VESA MIS-D interface (100x100 mm).

- Universal VESA MIS-D interface (100x100 mm)

The complete kit PFC 915 is available for standard ceiling mounting situations. This support is height adjustable (46-74 cm).

By adding the optional LCD interface FAU-D a back-to-back solution is created. By adding the optional LCD interface FAU-E one can create a "sky mounting" solution; in this case the included FAU-D will not be used. Sky mounting is new mounting option developed by Vogel's. The display can be mounted parallel to the ceiling for purposes where people are looking straight up (to the sky/ceiling). This option is very usefull for dental practices or other medical situations.

- CIS® Cable Inlay System
- Height adjustable, 457-740 mm
- Second display mounting with optional FAU-D interface
- Sloping ceiling mounting plate
- Special anti-theft screws
- Turn & tilt
